Modification du compte Monitor

sudo -u postgres -i
cd /production/pgsql/data/

Modification :

vim /production/pgsql/data/pg_hba.conf

```
#host    all         monitor     10.0.0.0/8           password
host    all         monitor     10.1.1.85/32           password
```

Modification mot de passe compte postgresql monitor :

psql test

```
test=# \du
                                 List of roles
  Role name   |                         Attributes                         | Member of
--------------+------------------------------------------------------------+-----------
 test         |                                                            | {}
 monitor      | Superuser                                                  | {}
 postgres     | Superuser, Create role, Create DB, Replication, Bypass RLS | {}
 postgresdump | Superuser                                                  | {}
```

ALTER USER monitor WITH PASSWORD 'password';

systemctl reload postgresql-12
Nb : pour avoir le nom exact du service : systemctl --type=service | grep postgre
