Installer Jellyfin sur raspi 5

Mettre à jour le raspi :

```
sudo apt update
sudo apt upgrade -y
```

Ajouter le support HTTPS à APT

```
sudo apt install apt-transport-https lsb-release
```

Récupérer la Clé GPG

```
curl https://repo.jellyfin.org/debian/jellyfin_team.gpg.key | gpg --dearmor | sudo tee /usr/share/keyrings/jellyfin-archive-keyring.gpg >/dev/null
```

Ajouter le Repository au raspi

```
echo "deb [signed-by=/usr/share/keyrings/jellyfin-archive-keyring.gpg arch=$( dpkg --print-architecture )] https://repo.jellyfin.org/debian $( lsb_release -c -s ) main" | sudo tee /etc/apt/sources.list.d/jellyfin.list
```

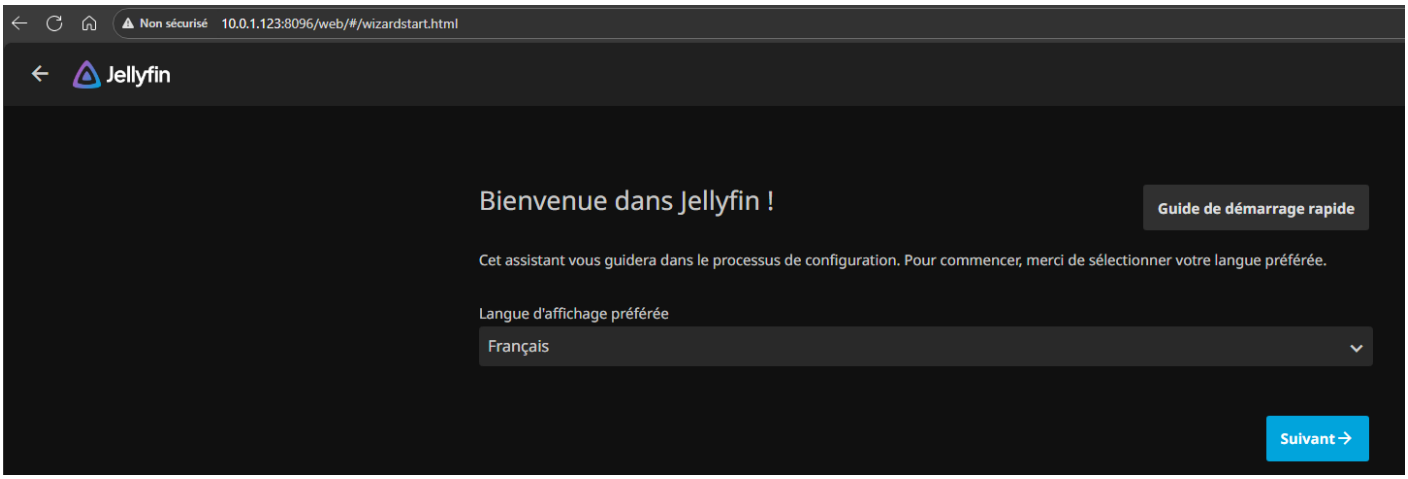

Refaire un update pour la liste des packages

```
sudo apt update
```

Maintenant on installe Jellyfin :

```
sudo apt install jellyfin
```

Jellyfin est installer et tourne sur l'ip de votre machine et le port 8096
